

Chart A

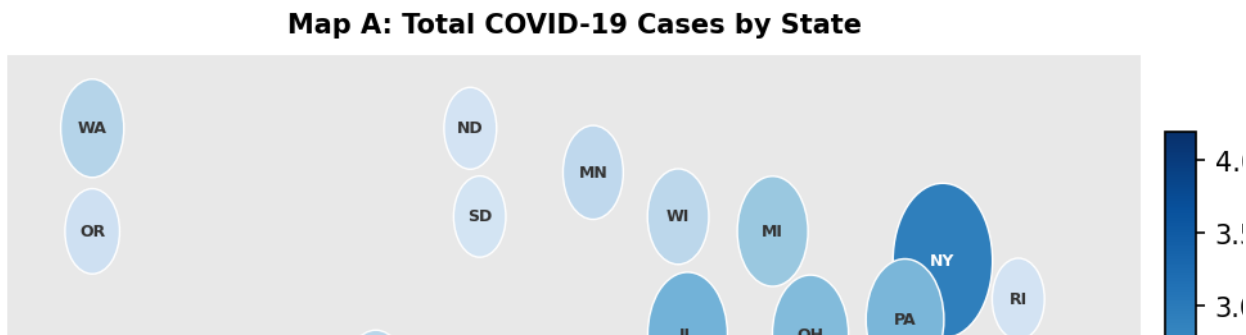

Product	Satisfaction Score (out of 100)
Product A	82
Product B	86

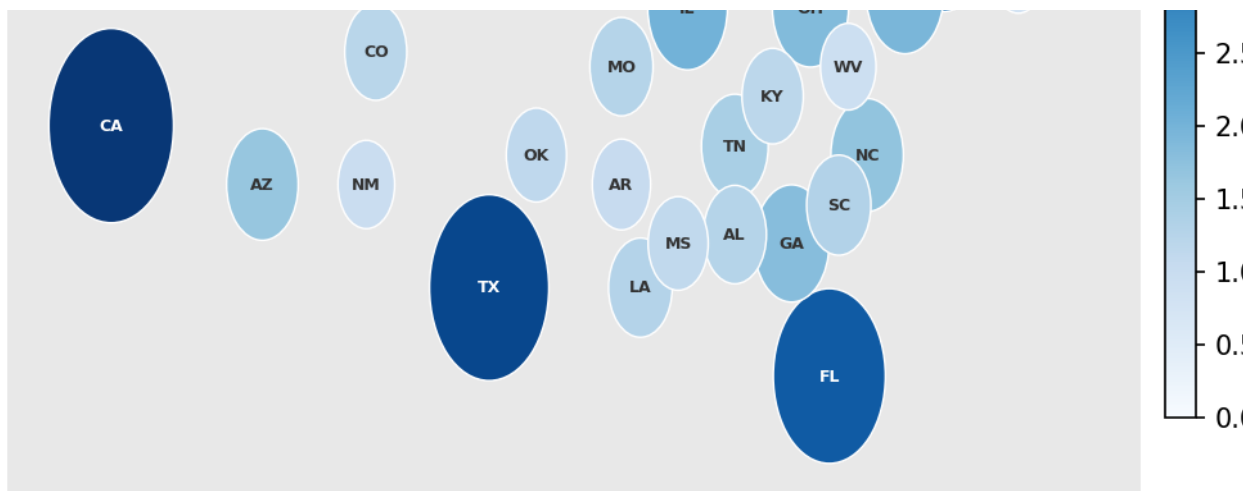

Analysis

- (a) The scale of the y-axis begins at 80 instead of zero.
- (b) This gives the impression that the difference between the two products is much larger than the c
- (c) Set the y-axis to a 0-100 scale to accurately portray the data.

Chart B

The Same Data,

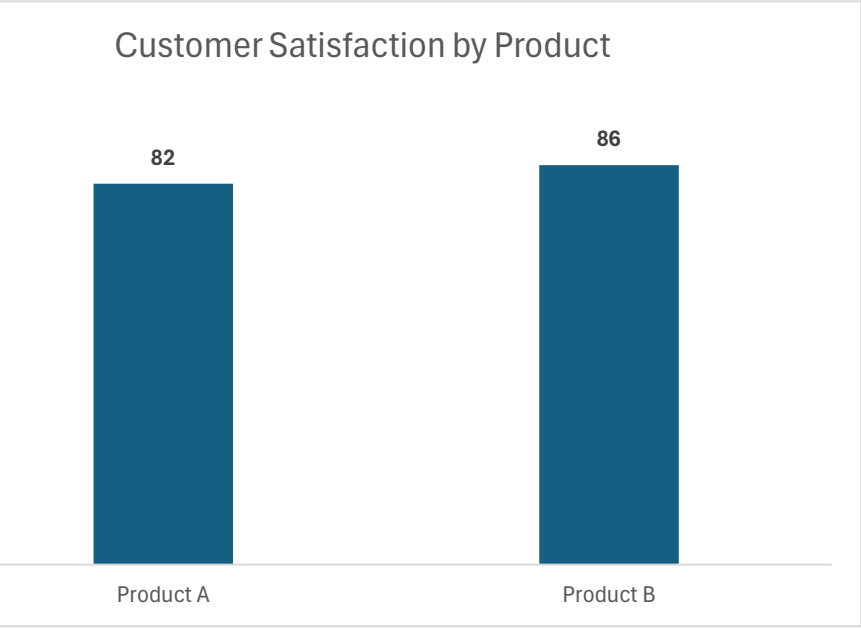

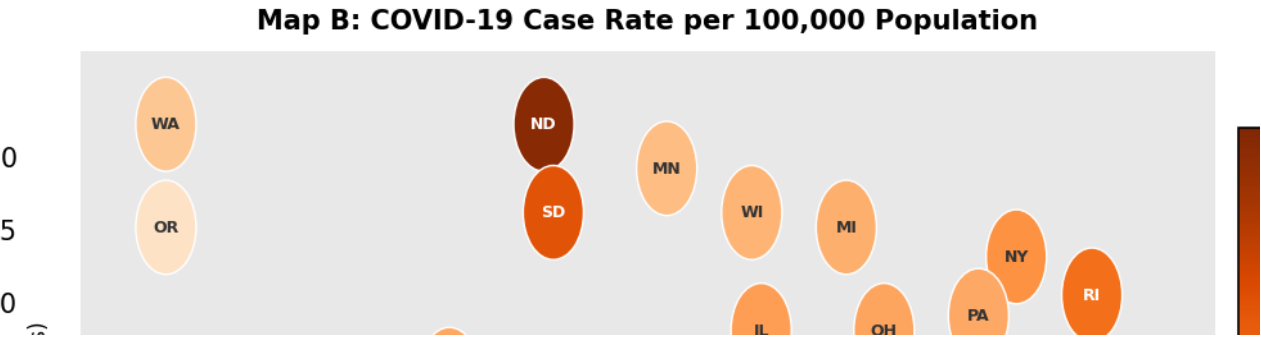

(A) Large states dominate when mapping raw counts

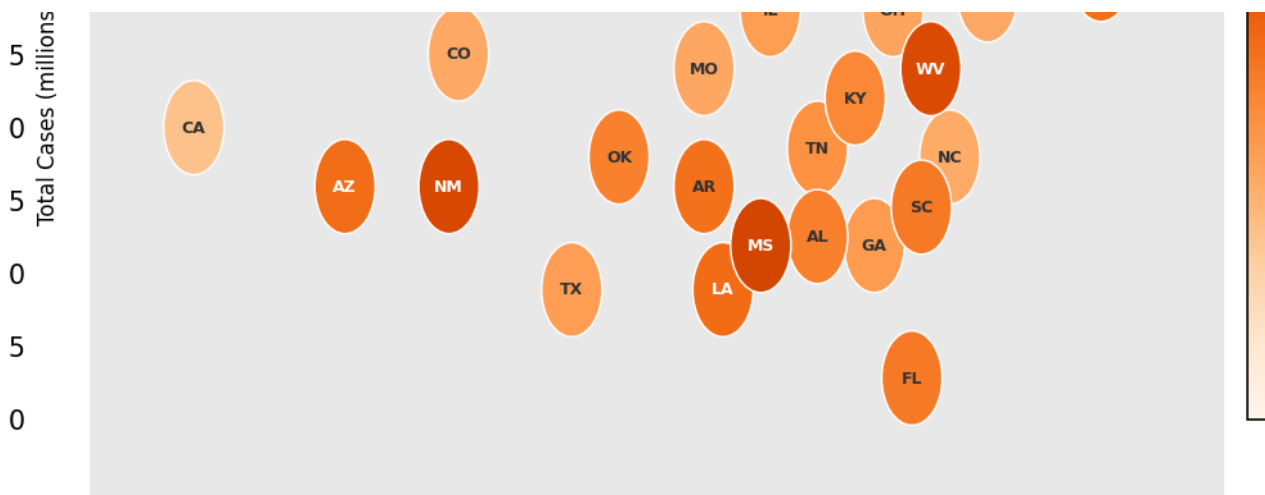

Analysis

- (a) California, Texas, and Florida are the darkest in Map A. North Dakota, West Virginia, and Mississippi
- (b) California and Texas have much larger populations than the other states in the map.
- (c) The flaw is confusing total cases with infection rate. Map B is the better map for this decision, it :
- (d) When reporting sales for wireless carrier retail locations, stores with higher traffic and more afflu

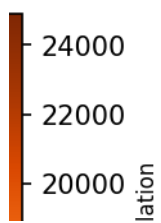

Two Very Different Stories

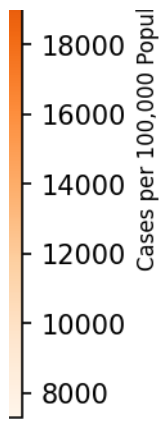

(B) Smaller states emerge when mapping rates

shows the states with the highest rates of infection, who need the resources to stop the transmission of the virus. As the number of infected customers are going to have higher sales totals than stores with lower traffic in lower income areas.

n of the virus.
